

RODDANCER PRODUCTS

Characterized by its accelerated cure cycle, glass like leveling, superior depth of image and gloss and long term water white clarity, ThreadMaster High Build also exhibits the unique characteristic of being quite a hard, durable finish, yet very flexible. This is the finest finish for decorative threadwork of all kinds...extremely durable and flexible with an ultra high gloss and virtually water clear.

ThreadMaster Lite retains all of the desirable high performance attributes of ThreadMaster High Build, but with a few added features. The viscosity has been reduced by about 35% giving the user the ultimate in thread saturation along with a thinner, less intrusive final topcoat. Additionally the thinner viscosity provides a virtually bubble free mix along with increased flexibility.
